Filter Paper	✓	✓	✓
Filter Paper	Decanter	Airpot	Container
			

RECOGNIZE:

1. Switch of the Extra Warmer on top.
2. On/off Switch with Indicator
3. Water tank inlet.
4. Extra Warming Plate
5. Filter Pan with Ring Spring
6. Machine Body. (Earthing terminal)
7. Power cable with plug
8. Warming Plate on base.
9. Decanter
10. "Brewing" Indicator (Green.)
11. "Warning" indicator (Red)

The Ring Spring must always wedge well on the Filter Pan. Otherwise coffee will overflow from the

bottom of Filter Pan.

The spring may lose its elasticity after used for a while. To expand it a little bit, then it can be resumed again.

INSTALLATION:

1. Place the Machine on a firm and horizontal table.
2. *Wedge the Spring well and Slide the Filter Pan into position of machine.*
3. Pour of cold water (no more then 2.2 liter) into the Water Reservoir, wait for 1 minute for water to force the air out of the Machine.
4. Place an empty Glass Decanter, Vacuum Pot or Thermos at correct position under the Filter Pan.
5. Turn the Switch ON and the "Brewing" Indicator lights up.
6. **HOT WATER** starts to flow into Glass Decanter, Vacuum Pot or Thermos.
7. 4~5 minutes later, the "In Use" Indicator will turn off the brewing process has ended.
8. You should repeat the above process 2 to 3 times to clean the internal parts of The Machine before brewing coffee for first time.
9. During above operation, it is normal to hear some hissing and billizy sound of water and to see some water vapor coming out.

DO NOT pour hot water into the Reservoir.

OPERATION:

1. Assembly the Filter Pan and put appropriate coffee on a Filter Paper.
2. Slide the Filter Pan into position.
3. Pour a pot of cool water into the water tank.
4. Place an empty Decanter or Pots at the correct under Filter Pan.
5. Switch the power ON, the “Brewing” Indicator process of brewing has begun.
6. Coffee start flows into the Decanter or Pots.
7. When “Brewing” Indicator lights off and there is no flows out from the unit, a brewing cycle has
8. The warmer on the base will continue heat up, until switch off.
9. For the unit without warmers, please turn power OFF, cap of Pot or Thermos. A pot of coffee can now be
10. Although the machine has an overflow pipe for the in case the amount of water in Reservoir exceeds. should be careful that the water does not exceed 2.2 avoid over flow.
11. Since there is always some water remaining in the unit boiler etc. If the Machine will not be used for some the Machine to be removed, please pour out the water and clean it before storage.
12. When the Machine is to be used again after a long please repeat steps of **Installation**.
13. If the Machine is not to be used for a short time, please clean the Machine with fresh water before using again.
14. If the Warning indicator lights up, it to remind user to de-scale in time.

MAINTENANCE:

■ Cleaning

It is important for the Machine and its accessories be kept clean after using.

- Unplug the coffee maker and allow to cool,
- Wipe all external surfaces including the hotplate with a damp cloth and dry thoroughly.
- The glass jug and filter basket should be washed in warm soapy water than rinse and dry all parts thoroughly.

No parts are suitable for cleaning in a dishwasher.
Never use harsh or abrasive cleaners.

■ De-sediments

If you operate in a hard water area, we recommend to de-scaling at regular intervals, e.g. every 2-3 months or as required.

If the brewing cycle takes longer time than usual, or the steam condition is bigger than normally, it is a signal that de-scale is necessary.

- Add 300 ml fresh lemon juice or condensed lemon juice to 1 liter of warm water (below 50°C).
- Slide Filter Pan and Place an empty Decanter or receptacles at the correct position under the Filter Pan.
- Pour solution of lemon juice into Water Reservoir and Turn the switch ON.
- Some of hot water will drop into the jug, until the solution of lemon juice push out the waters remained in the Machine; when there are some solution of lemon juice dropped into the jug, than turn the switch OFF.
- Wait for 5~6 minutes to enable the rest of solution to run through with sediments, than turn the switch ON again.
- When the indicator lights off, set switch OFF and flush the solution away.
- Since some solution will still remain in the Machine, we must run brewing process several times, until there is no more smell of lemon juice in the hot water which flow out from the Machine.
- The machine is ready for server again.

Failure to de-scale will invalidate your guarantee.

■ Re-setting

In case, if the brew cycle fails to operate appliance off and unplug from the power. Remove the rear cover and check to see if the button down on the side of the boiler. If the button presses down and clicks, then unit before next operation. If problem contact the Helpline.
